

# broadCAST

## WHO WE ARE

The Broad Collaboration for Advancing Spectrum Technology (broadCAST) holds that wireless technologies can be profoundly empowering when accessible to the public under equitable conditions. We are dedicated to promoting the right of all people to access a diverse marketplace of ideas via information and communication technologies. We recognize that increased civic awareness and participation in wireless policy debates is essential to public interest outcomes in these areas.

## WHAT WE DO

We are currently working to create a guide for communities interested in implementing a wireless Internet solution for less than \$10,000. The guide would provide information about applying for grants, searching for equipment, contacting Internet service providers and maintaining their network.

## HOW YOU CAN HELP

The success of this project hangs on cooperation from groups like you. Any information you can provide regarding the application process, vendors of equipment and Internet service who may be willing to help participating communities, or helpful contacts within government and business would be greatly appreciated.

## GET INTOUCH

If you feel you can help, please contact Frank Stec at [stec@uiuc.edu](mailto:stec@uiuc.edu).
